The series “Studies in Systems, Decision and Control” (SSDC) covers both new developments and advances, as well as the state of the art, in the various areas of broadly perceived systems, decision making and control—quickly, up to date and with a high quality. The intent is to cover the theory, applications, and perspectives on the state of the art and future developments relevant to systems, decision making, control, complex processes and related areas, as embedded in the fields of engineering, computer science, physics, economics, social and life sciences, as well as the paradigms and methodologies behind them. The series contains monographs, textbooks, lecture notes and edited volumes in systems, decision making and control spanning the areas of Cyber-Physical Systems, Autonomous Systems, Sensor Networks, Control Systems, Energy Systems, Automotive Systems, Biological Systems, Vehicular Networking and Connected Vehicles, Aerospace Systems, Automation, Manufacturing, Smart Grids, Nonlinear Systems, Power Systems, Robotics, Social Systems, Economic Systems and other. Of particular value to both the contributors and the readership are the short publication timeframe and the world-wide distribution and exposure which enable both a wide and rapid dissemination of research output.

Indexed by SCOPUS, DBLP, WTI Frankfurt eG, zbMATH, SCImago.

All books published in the series are submitted for consideration in Web of Science.

Preface

This book volume 1 Sustainable Responsible Practices in Technology and Business for Society 5.0 — Guideline for Next Generation is the culmination of a long-standing and fruitful collaboration between Ahlia University in Bahrain and Brunel University London. It reflects our shared commitment to addressing the challenges and opportunities that arise at the intersection of technology, business, and sustainable development within the emerging framework of Society 5.0.

Each chapter has been selected through a double-blind peer-review process to ensure the highest academic standards. The contributions collectively provide a comprehensive view of the sustainable transition toward a human-centered, technology-enabled society.

We extend our sincere gratitude to all contributors, reviewers, and colleagues who played a vital role in the realization of this work. It is our hope that this book serves as a valuable reference for scholars, practitioners, policymakers, and future leaders committed to building a sustainable and inclusive Society 5.0.
